

CONNECT RJ45 TO XLR AND..

**BREAK
FREE**

A TRIPLE AUDIO PRODUCT

Break Free, designed by Triple Audio, simplifies connectivity between RJ45-based analog, digital and microphone in and outputs to XLR.

We designed Break Free for easy mounting to D-type XLR holes.

Break Free is compatible with the product range of The Telos Alliance, Sonifex and many more brands that use the StudioHub+ pinout.

TIME = MONEY

Soldering cables is unnecessary when you use Break Free in combination with standard CATx data cables. With Break Free you reduce installation time.

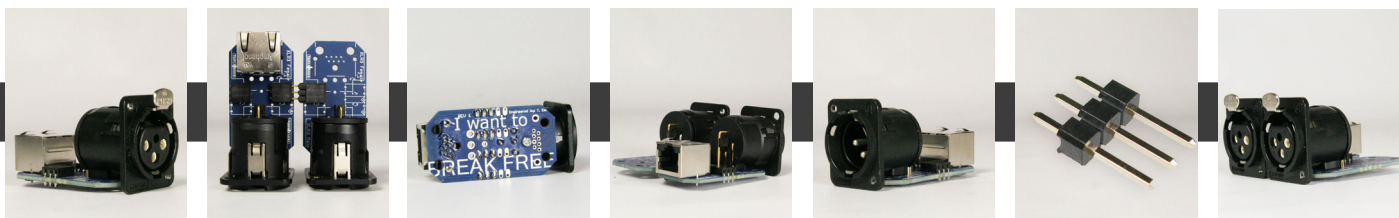

ENDLESS POSSIBILITIES

Break Free Stereo PCB's have adjustable pitch spacing, thanks to the board to board connector. This makes it possible to assemble Break Free's on panels of different pitches.

Break Free can be paired to create stereo in or outputs.

PRICES

Break Free Mono/AES Input	€ 25,-
Break Free Mono/AES Output	€ 25,-
Break Free Stereo Input	€ 50,-
Break Free Stereo Output	€ 50,-
